

One-Click TikTok Automation Setup with ChatGPT

Overview

This guide shows how to use ChatGPT to set up your TikTok auto-poster in minutes no technical knowledge required.

All you need is:

- This PDF
- A Google Drive account
- A Postiz/UploadPost account and API key
- A free Render.com account (for hosting)

Step 1: Open ChatGPT

1. Go to <https://chat.openai.com>
2. Log in or sign up
3. Upload this PDF directly into the chat window
4. Type the following message:

"Please help me set up this TikTok auto-poster system. Use Render to deploy n8n, help me connect my Google Drive, and upload videos using the UploadPost API as shown in the PDF."

ChatGPT will walk you through everything step-by-step.

Step 2: Deploy n8n Using ChatGPT

ChatGPT will either:

- Provide a one-click 'Deploy to Render' button
- Or walk you through creating a GitHub account and deploying n8n automatically via Render

In either case, it will result in your own live n8n instance (e.g., <https://your-n8n.onrender.com>).

Step 3: Configure Your Workflow

ChatGPT will help you:

- Connect your Google Drive credentials
- Import the TikTok workflow JSON
- Enter your UploadPost API key and username
- Test the system and activate it

Once done, your TikTok automation will run daily or hourly.

Tips for Fast Setup

- Have your Google account ready
- Get your UploadPost API key from your dashboard
- Be ready to share a link to the video(s) on Google Drive

ChatGPT will handle everything else for you.

Need Help?

- If anything doesn't work, just type:

"Something's not working, can you fix it for me?"

- Or contact the seller directly for guided support.
